The Endoscopic Bronchial Ultrasound system is a piece of equipment that would be a new purchase, not a replacement of old equipment and would provide the ability for more than 350 patients a year to stay closer to home here in Saint John instead of having to go to Moncton for this procedure. Used in the diagnosis and staging of treatment of chest and lung diseases, including lung cancer, Lymphoma, esophageal cancer, etc., this equipment is less invasive and more accurate, providing less pain and faster recovery time for patients. It also helps physicians in developing treatment plans and as a result, will really help move our program forward in the diagnosis and treatment of these kinds of cancers.
